**S Programming (Statistics and Computing)** William Venables, B.D. Ripley

S is a high-level language for manipulating, analysing and displaying

data. It forms the basis of two highly acclaimed and widely used data

analysis software systems, the commercial S-PLUS® and the Open

Source R. This book provides an in-depth guide to writing software in

the S language under either or both of those systems. It is intended

for readers who have some acquaintance with the S language and want to

know how to use it more effectively, for example to build re-usable

tools for streamlining routine data analysis or to implement new

statistical methods.

One of the outstanding strengths of the S language is the ease with

which it can be extended by users. S is a functional language, and

functions written by users are first-class objects treated in the same

way as functions provided by the system. S code is eminently readable

and so a good way to document precisely what algorithms were used, and

as much of the implementations are themselves written in S, they can be

studied as models and to understand their subtleties. The current

implementations also provide easy ways for S functions to call

compiled code written in C, Fortran and similar languages; this is

documented here in depth.

Increasingly S is being used for statistical or graphical analysis

within larger software systems or for whole vertical-market

applications. The interface facilities are most developed on

Windows® and these are covered with worked examples.

The authors have written the widely used Modern Applied Statistics with S-PLUS, now in its third edition, and several software libraries that enhance S-PLUS and R; these and the examples used in both books are available on the Internet.

Dr. W.N. Venables is a senior Statistician with the CSIRO/CMIS Environmetrics Project in Australia, having been at the Department of Statistics, University of Adelaide for many years previously.

Professor B.D. Ripley holds the Chair of Applied Statistics at the University of Oxford, and is the author of four other books on spatial statistics, simulation, pattern recognition and neural networks. Both authors are known and respected throughout the international S and R communities, for their books, workshops, short courses, freely available software and through their extensive contributions to the S-news and R mailing lists.

### **From reader reviews:**

#### **Melissa Sanders:**

Reading a publication can be one of a lot of action that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people love it. First reading a guide will give you a lot of new information. When you read a e-book you will get new information due to the fact book is one of many ways to share the information or maybe their idea. Second, reading a book will make anyone more imaginative. When you reading a book especially fiction book the author will bring that you imagine the story how the character types do it anything. Third, you could share your knowledge to some others. When you read this S Programming (Statistics and Computing), it is possible to tells your family, friends as well as soon about yours guide. Your knowledge can inspire the others, make them reading a book.

#### **Donald Jackson:**

The book with title S Programming (Statistics and Computing) has lot of information that you can learn it. You can get a lot of benefit after read this book. This particular book exist new expertise the information that exist in this guide represented the condition of the world at this point. That is important to yo7u to learn how the improvement of the world. This kind of book will bring you throughout new era of the syndication. You can read the e-book on the smart phone, so you can read it anywhere you want.

#### **Edward Trotta:**

In this period of time globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information quicker to share. You can find a lot of references to get information example: internet, magazine, book, and soon. You can observe that now, a lot of publisher in which print many kinds of book. The actual book that recommended for you is S Programming (Statistics and Computing) this book consist a lot of the information on the condition of this world now. That book was represented just how can the world has grown up. The terminology styles that writer require to explain it is easy to understand. Often the writer made some exploration when he makes this book. That is why this book suited all of you.

#### **Kari Hughes:**

In this particular era which is the greater man or who has ability to do something more are more valuable than other. Do you want to become certainly one of it? It is just simple solution to have that. What you must do is just spending your time very little but quite enough to possess a look at some books. One of the books in the top list in your reading list is usually S Programming (Statistics and Computing). This book which can be qualified as The Hungry Hillsides can get you closer in becoming precious person. By looking right up and review this publication you can get many advantages.
