General Momentum Theory for Horizontal Axis Wind Turbines (Research Topics in Wind Energy)

Jens Nørkær Sørensen

This book reconsiders the basic approaches behind the BEM method and in particular assesses and validates the equations forming the general momentum theory. One part of the book concerns the validation, using numerical fluid mechanics (CFD), of the different terms in the equations forming the momentum theory. Other parts present new ideas for extending the theory and for enhancing the accuracy of the BEM approach. Besides a general introduction and explanation of the momentum theory, the book also deals with specialized topics, such as diffuser-augmented rotors, wind tunnel corrections, tip corrections, and combined momentum/vortex theory for design of wind turbine rotors. The book contains new as well as already published material, and the author has strived to put the material into a new and more consistent context than what usually is found in similar text books.

The book is primarily intended for researchers and experienced students with a basic knowledge in fluid mechanics wishing to understand and expand their knowledge on wind turbine aerodynamics. The book is self-consistent, hence all necessary derivations are shown, and it should not be necessary to seek help in other literature to understand the contents of the book.

From reader reviews:

Clarence Riley:

Nowadays reading books become more than want or need but also turn into a life style. This reading behavior give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book in which improve your knowledge and information. The information you get based on what kind of book you read, if you want attract knowledge just go with education and learning books but if you want sense happy read one along with theme for entertaining for instance comic or novel. Often the General Momentum Theory for Horizontal Axis Wind Turbines (Research Topics in Wind Energy) is kind of reserve which is giving the reader unpredictable experience.

Jaclyn Utecht:

General Momentum Theory for Horizontal Axis Wind Turbines (Research Topics in Wind Energy) can be one of your starter books that are good idea. Many of us recommend that straight away because this guide has good vocabulary that may increase your knowledge in vocabulary, easy to understand, bit entertaining but nevertheless delivering the information. The author giving his/her effort that will put every word into satisfaction arrangement in writing General Momentum Theory for Horizontal Axis Wind Turbines (Research Topics in Wind Energy) although doesn't forget the main level, giving the reader the hottest along with based confirm resource facts that maybe you can be one among it. This great information could drawn you into completely new stage of crucial contemplating.

Ned Aguayo:

Are you kind of busy person, only have 10 or perhaps 15 minute in your moment to upgrading your mind ability or thinking skill even analytical thinking? Then you are experiencing problem with the book as compared to can satisfy your short period of time to read it because this time you only find e-book that need more time to be learn. General Momentum Theory for Horizontal Axis Wind Turbines (Research Topics in Wind Energy) can be your answer since it can be read by a person who have those short free time problems.

Karen Baskin:

The book untitled General Momentum Theory for Horizontal Axis Wind Turbines (Research Topics in Wind Energy) contain a lot of information on this. The writer explains your girlfriend idea with easy approach. The language is very clear and understandable all the people, so do certainly not worry, you can easy to read the item. The book was written by famous author. The author will bring you in the new period of time of literary works. You can read this book because you can please read on your smart phone, or model, so you can read the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can open their official web-site in addition to order it. Have a nice study.
